

MACNEILLIE

Specialist vehicles for security & resilience
World class vehicle converter
& integration provider

World class vehicle converter & integration provider

Helping you in an ever changing world

The threats posed today, from terrorists to natural disasters, continue to grow to unprecedented levels. This continual challenge to governments and organisations requires an ever greater resilience coupled with specialist vehicles and systems that you can trust to deliver 24/7.

MacNeillie is the leading UK specialist vehicle converter and integrator of technical and complex electronic and communication systems. We offer one of the largest and comprehensive choices of products within the vehicle conversion market, customised to the specific requirements of emergency services and government and security focused organisations across the world.

A Babcock International Group company, MacNeillie is uniquely placed to meet complex vehicle conversion requirements and has the capability to support those vehicles globally - offering a full and consummate fleet solution.

World class capability

With a heritage spanning over 100-years, we have established a world class capability in combining innovation, craftsmanship and technical excellence to support our customers in a diverse and changing world. MacNeillie consistently provide a compliant, superior level of manufacturing standards for all customers.

Our complete and customised solutions include:

- Market leading vehicle conversions
- Electrical & communication systems integration
- Covert & overt solutions
- Specialist composite solutions
- Bomb disposal vehicles
- Armoured products
- Through-life support & service packs

We are committed to innovation with a continuous Research & Development programme in place, verifying new products to ensure capability including vehicle integration techniques, improved power requirements, superior blast and ballistic protection.

Our capacity planning management system allows high and low volume orders to be processed through our high security facility to meet our customer requirements.

Our products

Our customers trust us to deliver resilient customised solutions. We never compromise on quality, health & safety and best environmental practice for the benefits of all. Our products include:

Armoured vehicles:

Deployed worldwide, our products provide the necessary protection across a diverse range of vehicle platforms ranging from saloon cars and SUVs to larger specialist builds.

The protection levels are customised to the client and their perceived threat levels.

Police:

We design and produce customised covert and overt solutions for a range of vehicles including motorbikes, cars and light and heavy commercial vehicles. Conversion

models include: control & command; incident support; observation, public order and traffic; firearms and forensic; and prisoner transportation vehicles.

Fire

A variety of vehicles are produced for this sector including; small and 4x4 rural appliances, water rescue vehicles, officer/ commander cars, fast response cars, first response vans, incident control and bespoke specialist vehicles.

Ambulance

We offer a range of ambulances including: accident and emergency; neonatal/paediatric; high dependency; rapid response; emergency care practitioner; and patient transport services.

Specialist

We produce a variety of specialist conversions for job specific roles such as Explosive Ordnance Disposal (EOD) vehicles and Chemical, Biological, Radioactive & Nuclear (CBRN) vehicles.

Specialist capabilities

MacNeillie is at the cutting edge of vehicle conversions, delivering best-of-breed technology and capability to its customers:

High performing Composites

Our Composites Division manufactures quality composite solutions for vehicles, and provides innovative solutions to many of today's operational challenges. Our products and designs offer a number of advantages over more conventional materials including weight saving initiatives, strength, impact resistance and covert applications.

Our product range is varied - our composite specialist bodies are used for riot protection or public order vehicles where the high impact resistance and weight saving characteristics offer a range of benefits. We also offer specialist coach-built vehicle bodies, for example, horseboxes and underwater search units where the regular occurrence of exposure to fluids and water will have a detrimental effect on traditional style bodies.

Integrated communications

We recognise the fast paced, ever changing environment in which your people operate in. For increased capability and peace of mind, we can support your vehicles with communication and survivability options including cameras and a range of electronic security.

Our compliant integrated in-vehicle communications and data system solutions cover the design and installation for both covert and overt vehicles. Our specialist communications hub can deliver large programmes across fleets as well having the capability to asset track, log and repair equipment.

We have in-house Electromagnetic Compatibility (EMC) test facilities to assess radio equipment to ensure that the conversion of the vehicle does not impact the machine's performance.

Focussed on our customers

Supporting your product

We can deliver services across the whole-life of your vehicles – from vehicle design, service packs and full availability contracts, through to the disposal and decommissioning of vehicles.

We have proven capability in working with organisations with complex and critical requirements – programmes that require resilience and delivery from day one.

Supporting you

MacNeillie prides itself on building long term relationships with its customers, working with them on meeting customised vehicle conversion requirements within an agreed timeframe as well as delivering a range of after sales services which include:

- A dedicated customer helpdesk supported by our After Sales and Technical teams
- High demand stock onsite, enabling a large proportion of commercial vehicle parts to be available for next day delivery
- Mobile Client Support Teams providing an invaluable service on a daily basis, maintaining and carrying out installations onsite to minimise any vehicle downtime
- User and workshop training programmes, offering full assurance that both the operational staff and those responsible for the upkeep of the vehicle are fully conversant with the asset

Additionally, MacNeillie has a well-established and professional project management team who oversee large contracts. These dedicated contract managers work closely with our production departments and the client to ensure that the vehicle conversions are built to the correct specification, and to the quality expected.

If you have a requirement which we can provide assistance for, please contact:
